Better data, not bigger models

Yonatan Most · Adnan Agbaria

2026 is the lowest line on the chart

Kinneret level through the year, in metres, 2020 to 2026

Simple won. The neural network learned nothing.

Next-week forecasts, best case (the real weather) · 1 = perfect, 0 = average

The newest oldest trick in the book

(prompt in images/lesson.prompt.txt)

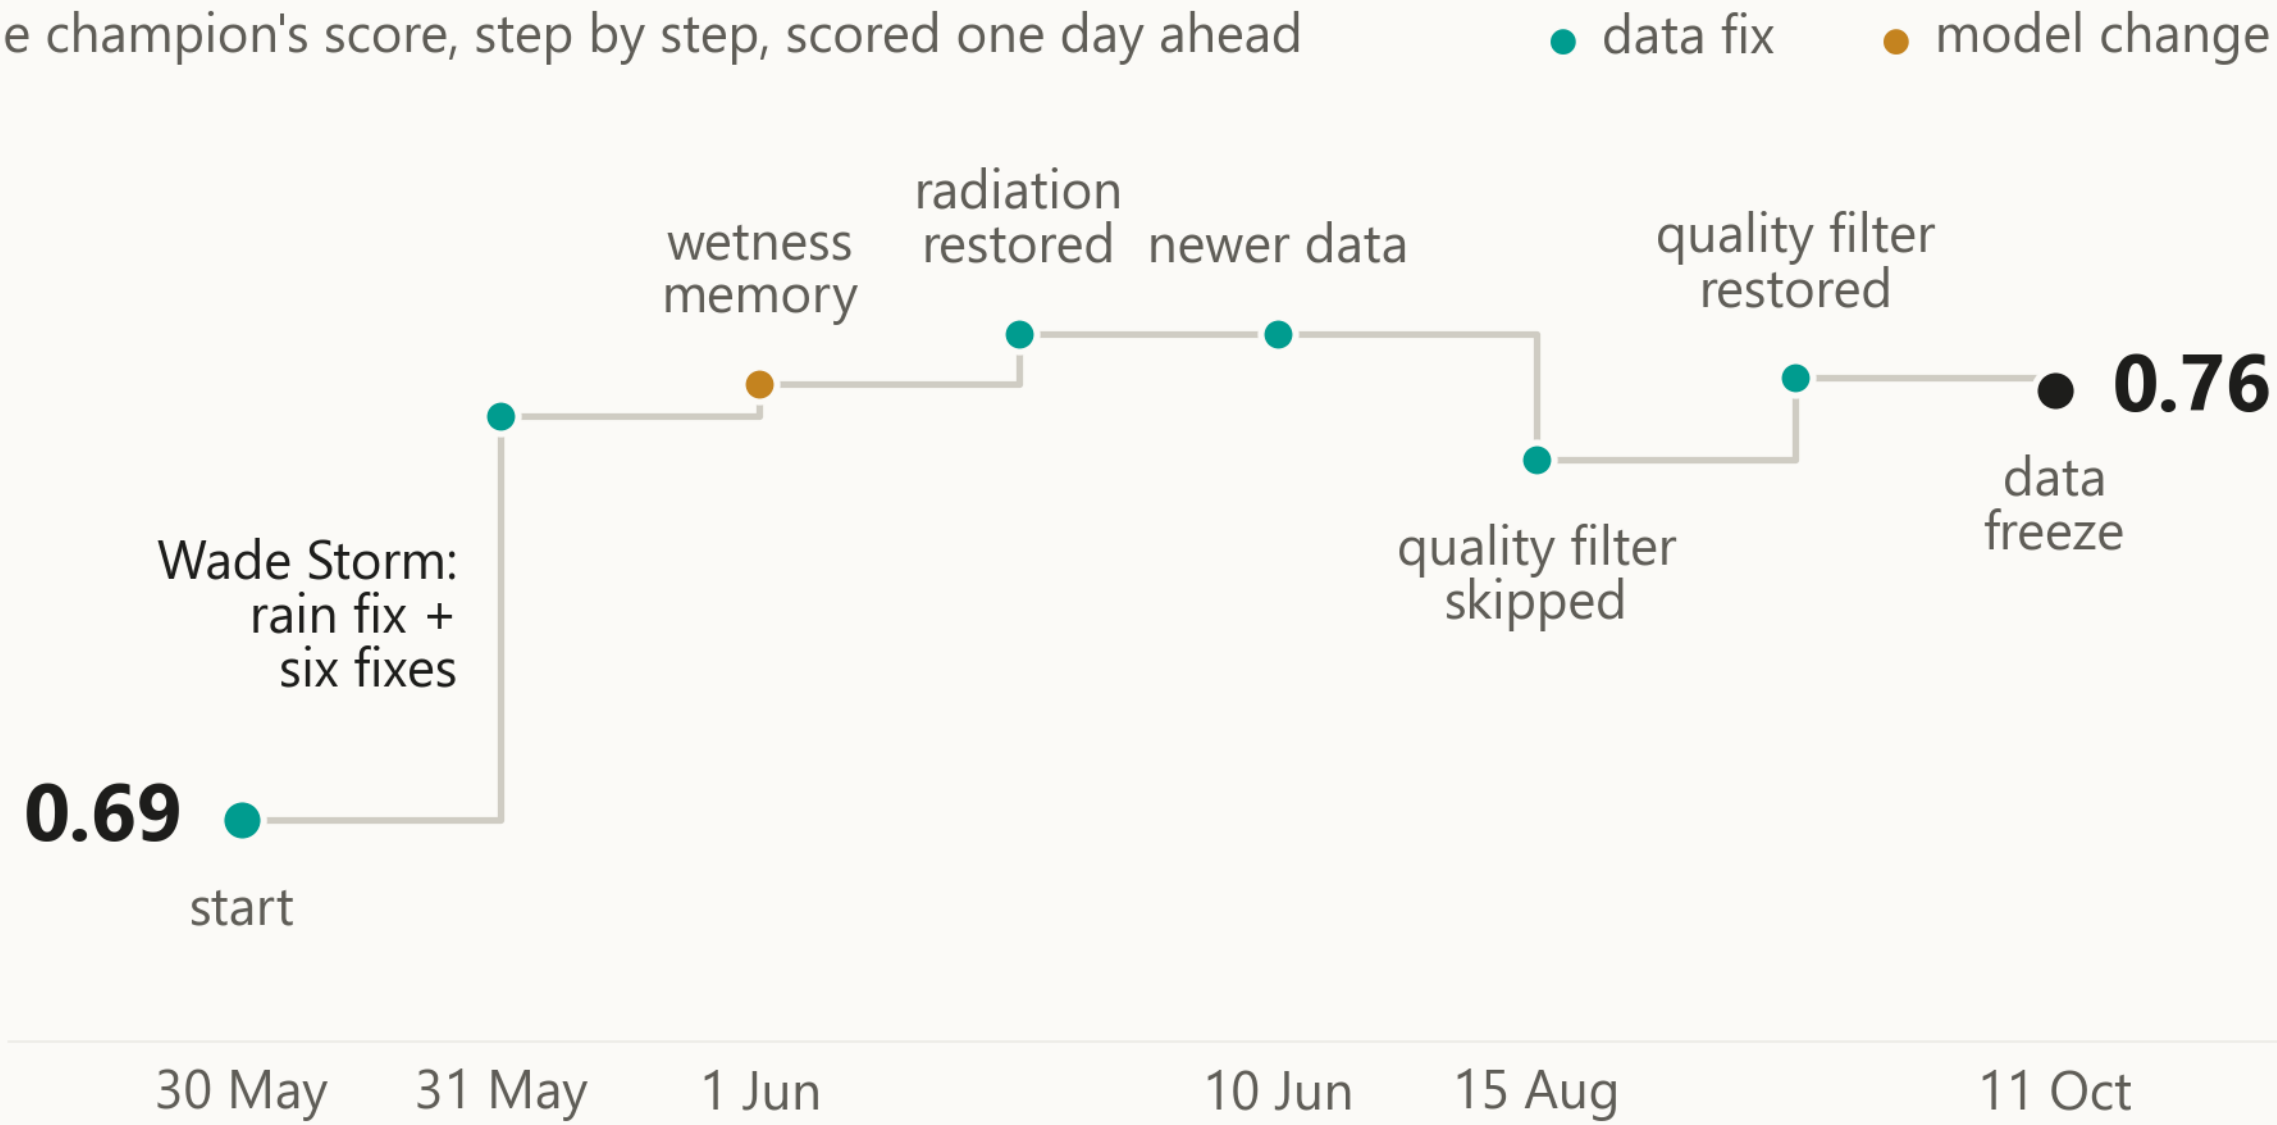

Tomorrow, the model reads the lake well

One day ahead, best case (the real weather) · 1 = perfect, 0 = average

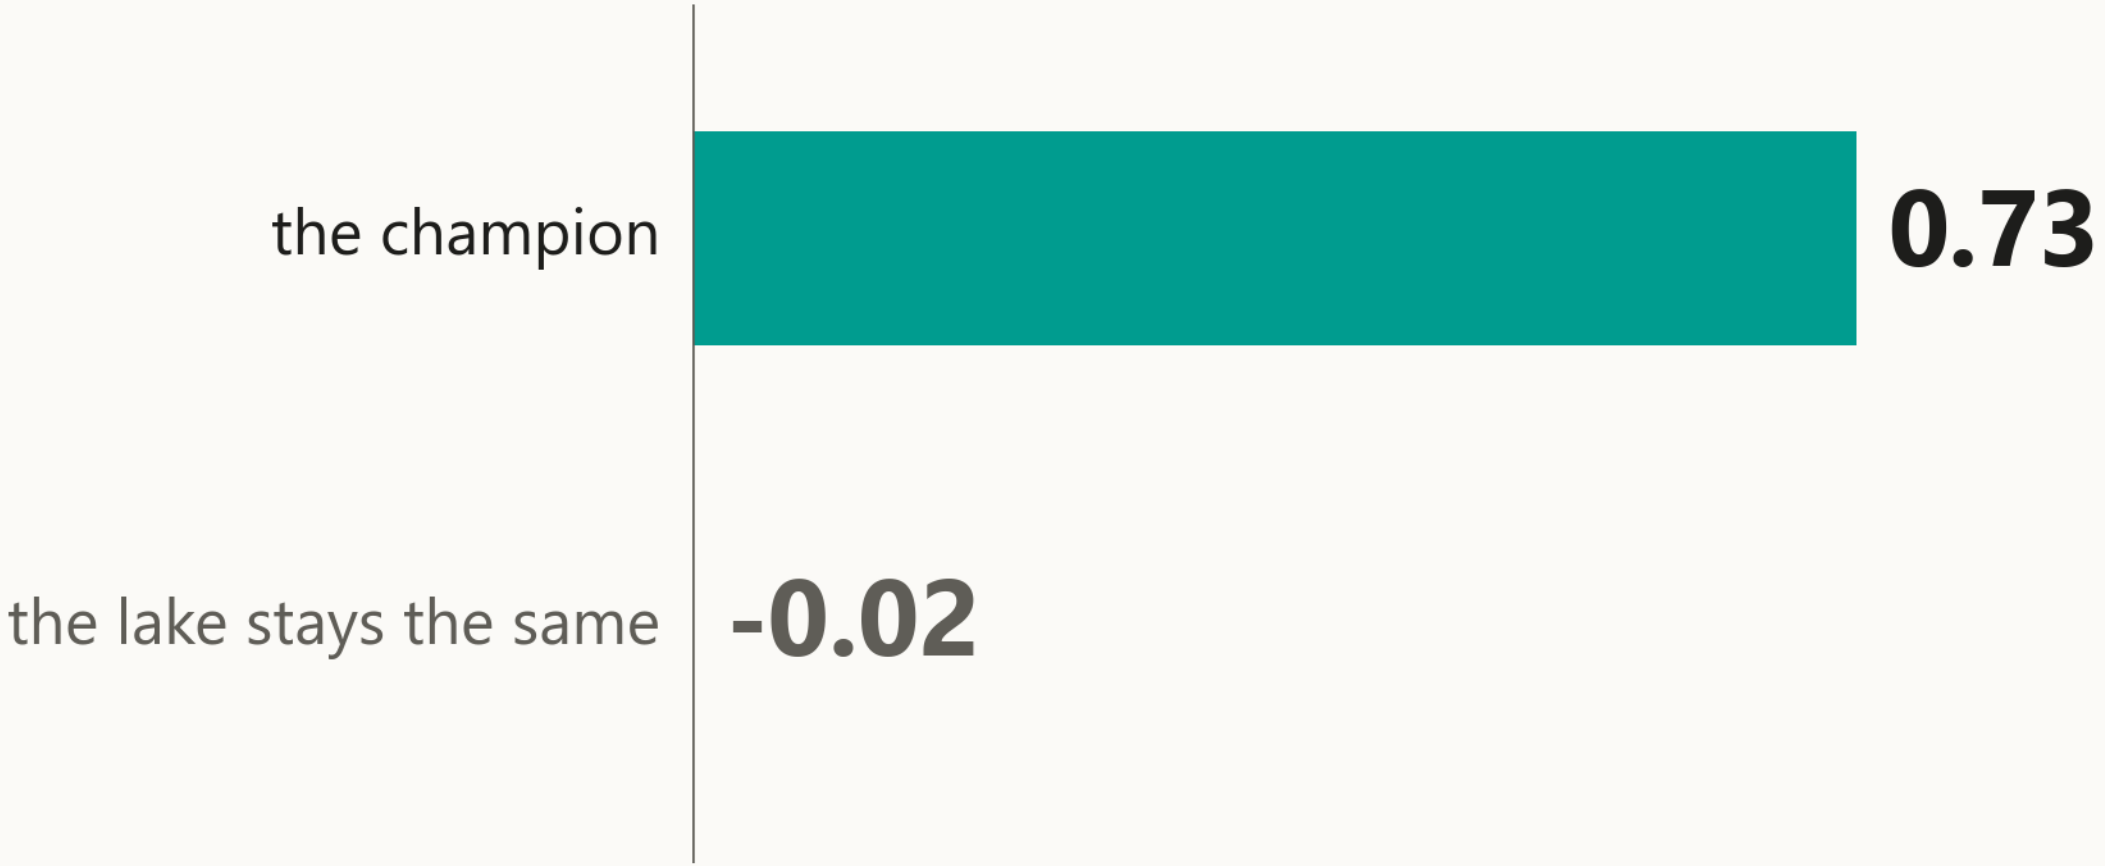

Most of the gain came from fixing data

The champion's score, step by step, scored one day ahead

One week ahead, the model clearly beats “no change”

Next-week forecasts, best case (the real weather) · 1 = perfect, 0 = average

push.png
(prompt in images/push.prompt.txt)

The further ahead, the less we can see

Each panel is measured its own way: read them side by side

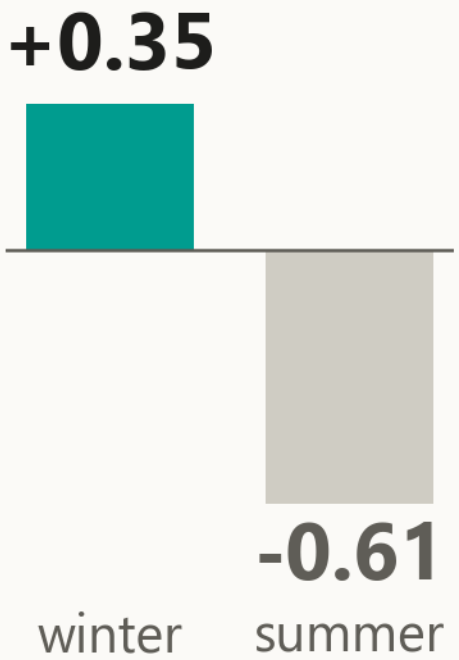

1 week

best case

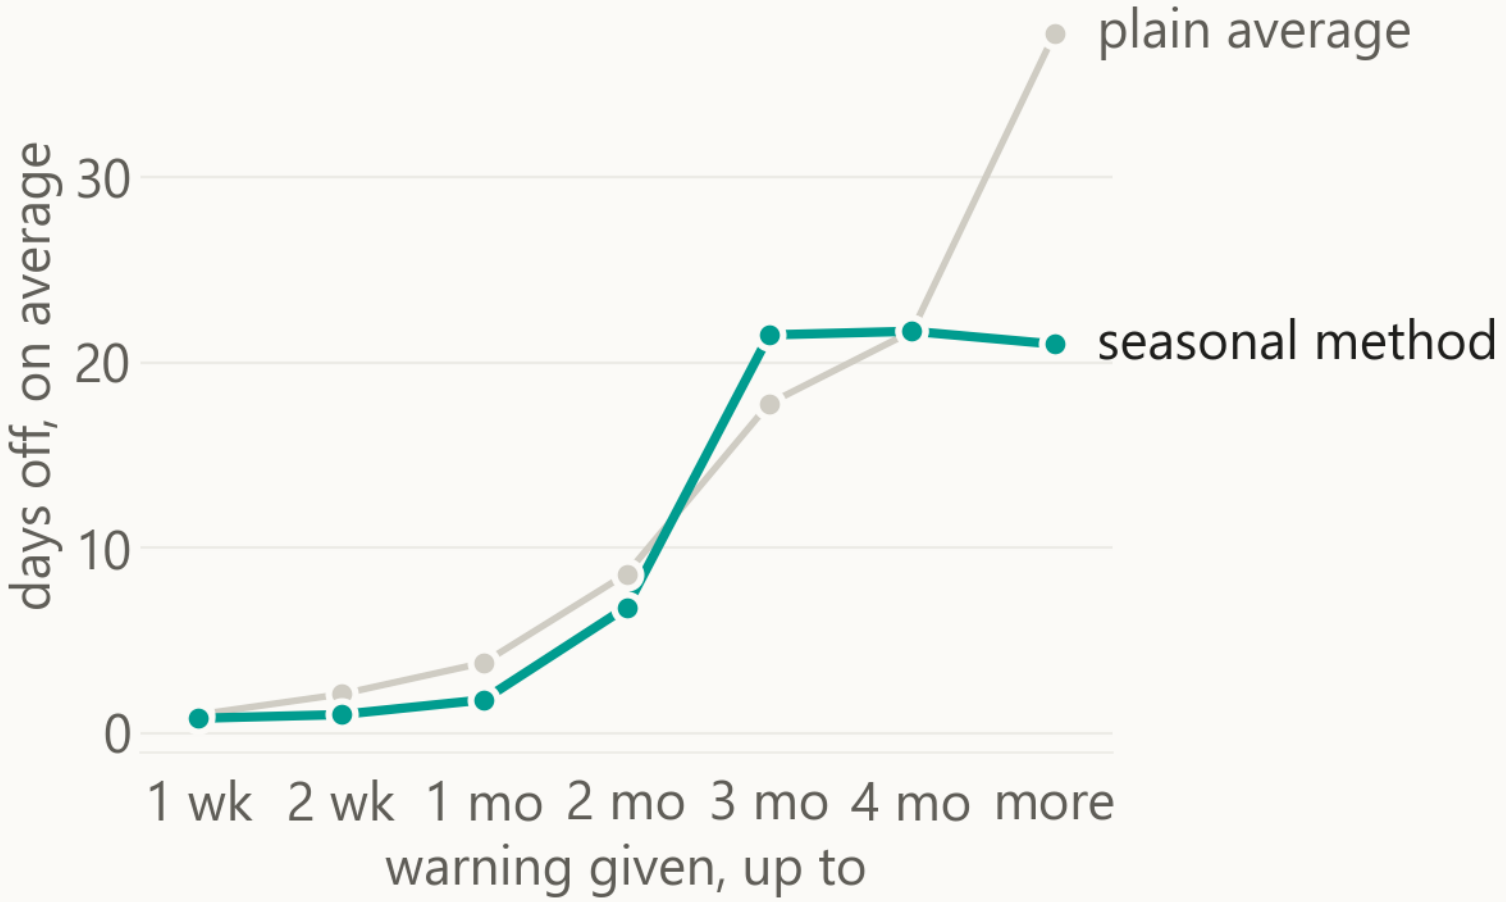

2 to 4 weeks

best case

Summer red-line date

seasonal method, not machine learning
